Embedded System Practice Lab 5

2016311821 한승하

lodev를 통한 read/write를 위해 protocol 과정에 맞춰 iodev_write함수를 작성한 후, 컴파일 하여 4k_write을 시도하였습니다. 이때 ~/emu의 경로가 실행되지 않아 /home/han/emu의 경로로 iodev_init의 코드를 수정하였습니다.

lodev write에선 LBA_REG에 lpn을 써주는 과정과, writel을 통해 BUF_REG에 쓰기요청을 하는 과정, CMD_REG에 WRITE_CMD를 전송하는 과정을 작성하였습니다.

```
han@han:~$ ~/my-android-toolchain/bin/x86_64-linux-android-gcc -pie 4k_write.c

4k_write.c:22:8: warning: implicit declaration of function 'write' is invalid in C99 [-Wimplicit-function-declaration]

ret = write(fd, buf, 4096);

4k_write.c:26:2: warning: implicit declaration of function 'close' is invalid in C99 [-Wimplicit-function-declaration]

close(fd);

2 warnings generated.

han@han:~$ adb push a.out /data/local/tmp

a.out: 1 file pushed, 0 skipped. 0.5 MB/s (7480 bytes in 0.015s)

han@han!~$ adb shell

generic_x86_64:/ $ su

generic_x86_64:/ # ./data/local/tmp/a.out

ret: 4096

generic_x86_64:/ #
```

성공적으로 4096 byte의 character가 쓰여진 모습입니다.

이후에 qemu폴더의 iodev.disk를 확인해 보면

다음과 같이 정상적으로 write가 되어있는 모습을 확인할 수 있었습니다.

이후 Read를 위해 iodev.c를 작성해 주었습니다.

goldfish_iodev_write를 참고하여 Read의 동작으로 올 수 있는 STATUS, BUF에 대한 동작을 정의해 주었습니다.

이후 iodev_read함수를 작성하였습니다.

```
static ssize_t iodev_read (struct file *file, char __user *buf, size_t size, loff_t *loff) {
   int i;
   uint32_t lpn;
          if (*loff & (PAGE_SIZE - 1) || size != PAGE_SIZE )
                    return -EINVAL;
          lpn = (uint32_t)(*loff >> PAGE_SHIFT);
          /*(iodev_read)
                    1. Read status register (wait if busy)

    Write command register
    Read buf (check loff whether it aligned to 4K)
    Wait for completion (interrupt)

                    5. copy_to_user()
          while (readl(idata->reg_base) != DEV_READY); //1
          spin_lock_irq(&wait_q_lock);
          condition = 0;
          writel(lpn,idata->reg_base + LBA_REG);
          writel(READ_CMD,idata->reg_base + CMD_REG); //2
          wait_event_lock_irq(wait_q, condition, wait_q_lock);
spin_unlock_irq(&wait_q_lock);
          for (i = 0; i < PAGE_SIZE / sizeof(uint32_t); i++ ) {
   kbuf[i] = readl(idata->reg_base + BUF_REG); //3
          copy_to_user(buf, (char*)kbuf, size);
          return size;
```

lodev read의 protocol순서가 주석과 ppt슬라이드가 달라, ppt를 기준으로 작성하였습니다.

lodev_write와 유사하게 spin_lock을 잡아주고, LBA_REG에 lpn을 써준 후 READ_CMD를 날리고 신호를 기다려 주었습니다.

이후 kbuf로 data를 읽어 온 후, copy_to_user를 사용하여 user_buffer에 전달해 주었습니다.

이후 emulator를 종료 후 다시 실행시켰을 때

```
generic_86_64: # ./[data](cal.)(rp.)4.out
red supcess : assaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassaysassa
```

다음과 같이 성공적으로 Read되었습니다.

감사합니다.
